ISO 27001

Information Security Management Systems

ISO 27001:2013

Poor information security management often results in information loss, loss or leakage of intellectual property, breach of firewalls, viruses, fraud and cyberattacks.

This often results in serious continuity, commercial, and resilience issues often resulting in a loss of customer / client confidence and even continued business.

ISO 27001 helps organizations to increase confidence in their information security management systems. Designed to minimise information security incidents ISO 27001 also provides a framework to assist businesses and organizations to demonstrate compliance with legal requirements such as GDPR.

Based on the 'plan – do – check – act' model common with ISO9001 and ISO 14001 an ISMS based on ISO 27001 make use of risk assessment and business impact analysis, in order to identify and manage risk to ensure the security and availability of information.

The build process for ISO 27001 involves a risk assessment procedure that identifies and assesses potential risks from a broad range of scoped information assets.

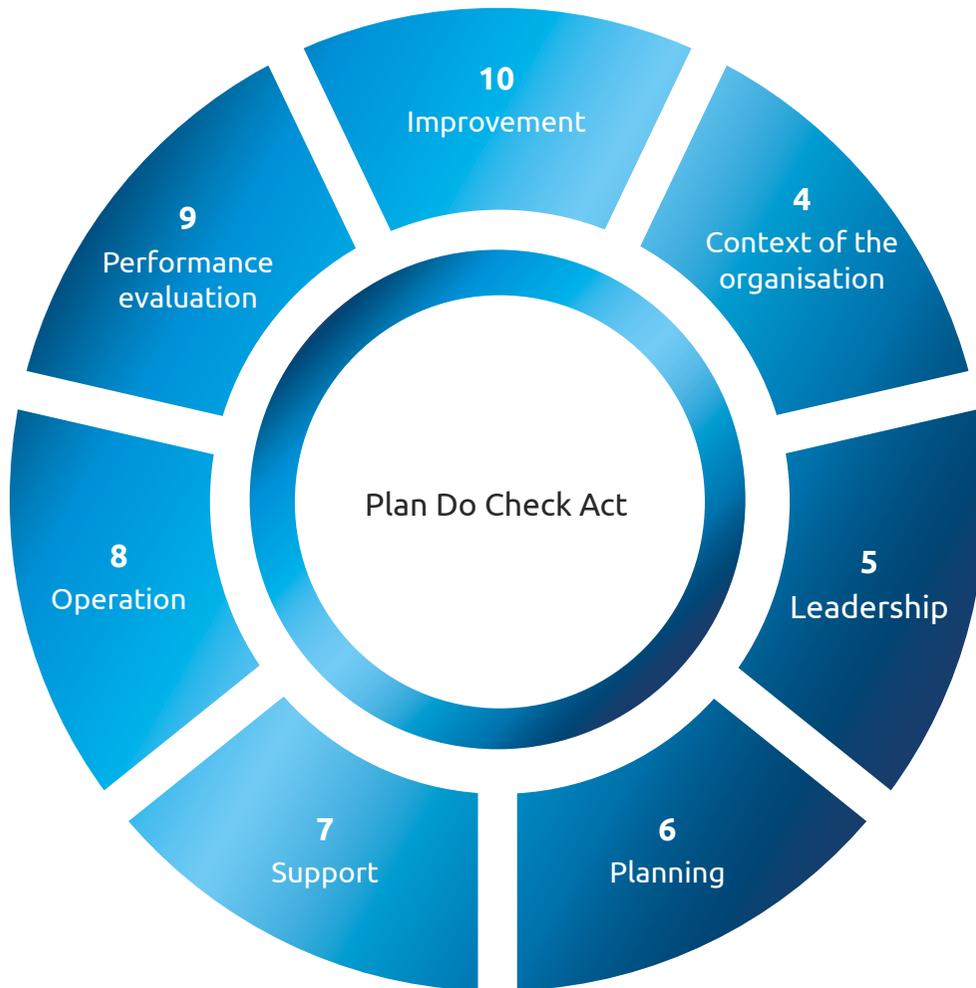

The process includes identifying how and where information is stored, who uses it, where it is used and how. The process involves the organization as a whole and not just the IT department or senior management team.

Becoming a ISO 27001 certified business or organization demonstrates commitment to information security to interested parties. It also establishes a solid competitive advantage.

ISO 27001 Content

ISO 27001 is made up of the following sections

ISO 27001:2013 follows Annex SL, the higher level structure for ISO management systems making it easier to integrate with other standards such as ISO 9001, ISO 14001 etc.

It follows a 'Plan-Do-Check-Act' approach together with a clearer focus on information security leadership, risk management, meaningful OH&S objectives and the measurement of performance.

Benefits of achieving the ISO 27001 certification:

Benefits derived from the protection of information assets relate directly to the prevention of information incidents and threats to business continuity.

By implementing an effective information security management system or ISMS based on ISO 27001:2013 your business or organization will benefit from controls that reduce the risk of costly information security risks and disruption.

Working with one of our dedicated DAT ISO 27001 consultants, your business or organization will increase both knowledge and confidence based on industry best practice. This will ensure that your information security management system (ISMS) is routinely reviewed and updated to ensure it remains robust and effective.

ISO 27001 Leadership

Leadership and commitment are the key to successful organisations, and they are essential requirements of ISO 27001.

Your organization's leadership takes responsibility for the information security management system or ISMS, taking accountability for its overall effectiveness. It is crucial that the ISMS become integral to the organization's everyday operations and drives towards continual improvement.

Information security leadership is developed during coaching provided by our consultants, this ensures that your leadership team understand what it means to be successful information security leaders.

ISO 27001 Consultants

Choosing the right consultant is vital to the success of your ISO 27001 system and achieving accredited certification.

Great ISO 27001 consultants differentiate themselves through effective skills, real life experience and competences developed across various business sectors and challenging situations.

They possess the ability to adapt to the variable demands often presented by risk treatment, established confidentiality protocols, IT systems, customer requirements, interested parties, associated products and services.

Our dedicated ISO 27001 consultants are experts in the delivery of ISMS certification. During the system build your ISO 27001 consultant will coach and encourage your team enabling them to get the most out of your new ISMS.
